

DEFENSE TECHNOLOGY®

PRODUCT SPECIFICATIONS

| | |
|----------|---|
| Material | Aluminum (seamless construction) Part 178.33a Specification 2Q |
| Height | 4.45 in / 11.3 cm |
| Diameter | 1.0 in / 2.54 cm |
| Warranty | 5 years from date of manufacture |

All Specifications are Averages and Subject to Change

SAFETY: A slide lock mechanism on the actuator prevents the projector from being accidentally discharged. In the rotated locked position, the actuator cannot be depressed and the nozzle is blocked. A simple, short rotation of the lock allows the projector to be readied for deployment. A keychain is provided for convenient carry.

LABELING: Wear and water-resistant labels, individually serialized to permit easy identification, are affixed to all units. Lot numbers for formulation are present for quality assurance tracking.

MK-8 AEROSOL PROJECTOR

*Liquid volumes in aerosols containing 134a are greater than those using Nitrogen as the propellant.

WARNING: Aerosol products described here are intended to be used only by authorized and trained Law Enforcement, Corrections, or Military Personnel. Additional product information and training is available from Defense Technology®. Handle, store and use with care and caution.

Safariland Less Lethal no longer recognizes Scoville Heat Units (SHU's) as a viable means to measure heat in regards to pepper spray (OC). SHU's are a measure based on the perception of heat which is assigned to various peppers by a panel of five tasters as described in the American Spice Trade Association, Analytical Method 21.0. The only true way to determine the heat value of a pepper spray is by laboratory assay of Major Capsaicinoids.
