

# SYSTEM OF NARCOTICS IDENTIFICATION

## INSTRUCTIONS FOR USE

### TEST D

**FOR:** LSD (Lysergic Acid Diethylamide)

#### Test Function

1. This reagent system presumptively identifies LSD (Lysergic Acid Diethylamide).

#### How to Use Test D

1. Remove clip and insert into the test pouch an amount of powdered suspect material that fits inside this circle.  Reseal the pouch with clip and tap or agitate gently to assure material falls to the bottom of the pouch.
2. Break the ampoules, beginning from left to right, by squeezing the center of the ampoules with the tips of the thumb and forefinger.
3. Break the left ampoule and agitate vigorously for 30 seconds.
4. Break the middle ampoule and agitate gently for 30 seconds. A purple color developing within 30-60 seconds indicates the presence of LSD.
5. Break the right ampoule and agitate gently. The purple color from the previous step should intensify if LSD is present.

#### Interpretation of Resulting Colors

1. A purple color developing with the second ampoule and intensifying with the third ampoule presumptively indicates the presence of LSD.
2. It is advisable that this test be used in conjunction with others in the NIK® Polytesting System.

#### CAUTION

- A. Since these tests contain strong acid or base, it is suggested that Test F - Acid Neutralizer be used after testing and before disposal.
- B. Before discarding used test pouches, remove the clip and add one measure of acid neutralizer from Test F.
- C. Add slowly to prevent bubbling over.
- D. Do not reseal the test pouch until effervescence has completely stopped.
- E. Reseal the test pouch with the clip and discard in a tamper-free disposal unit.
- F. No attempt should be made to crush the glass particles after the ampoules have been broken.
- G. **Antidote:** In case of contact, immediately flush eyes or skin with water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. If swallowed, do not give emetics. Contact a physician.

#### WARNING

These tests are NOT designed for use with liquid samples.
